

## **Cascade Tel Offers SD-WAN-as-a-Service to SMBs**

*Cascade Tel Helps SMBs Utilize  
Advanced Virtualization  
Technology to Increase Office  
Productivity*

BEND, OR – April 2019 - Cascade Tel a leading managed technology services provider (MTSP), announced today that the company now offers SD-WAN-as-a-Service to their small to mid-sized business (SMB) customers. SD-WAN is a leading technology and according to research firm Gartner, “by the end of 2019, 30% of enterprises will deploy SD-WAN technology in their branches.” The reason for the technology’s rise in popularity is due to its simultaneous capacities to increase productivity within an organization while also reducing the total cost of ownership.

To define the term, SD-WAN is an acronym for software-defined networking in a wide area network (WAN). SD-WAN simplifies the management and operation of a WAN by separating the networking hardware from its control mechanism. This concept is similar to how software-defined networking implements virtualization technology to improve data center management and operation. A key application of SD-WAN is to allow companies to build higher-performance WANs using lower-cost and commercially available Internet access, enabling businesses to partially or wholly replace more expensive private WAN connection technologies such as Multiprotocol Label

Switching (MPLS). SMBs that need to scale up or scale down quickly or need to run multiple remote offices or would like greater visibility into their networks can benefit greatly from this technology.

“The organizations that we work with are always looking for these kinds of breakthroughs,” stated Brian Thomas, President and CEO of Cascade Tel. “SD-WAN enables an unprecedented level of flexibility and in today’s volatile marketplace, the ability to scale up or down is simply a must-have.”

Cascade Tel is also a Member of Technology Assurance Group (TAG), an organization of managed technology services providers, who collectively deliver over \$350M of products/services to the marketplace. TAG operates in 136 cities and serves over 400,000 customers, which affords them access to best practices and knowledge for deploying SD-WAN effectively and efficiently. They also leverage their collective buying power to offer better pricing to end-users.

“Business owners just want their technology to work,” added Thomas. “SD-WAN is the best way for us to help all of the underlying technology within in an organization work even better. We’re very excited about offering SD-WAN-as-a-Service because it enables us to help companies be flexible and nimble when they must respond to today’s extremely fast-paced environment. The marketplace now demands mobility, rapid scaling or descaling

capabilities and impenetrable security, and SD-WAN is the perfect fit.”

### **ABOUT CASCADE TEL**

Cascade Tel is locally owned and operated and is Central Oregon’s business owner’s first choice for over 23 years. Cascade Tel’s goal is to provide each client a custom designed telecommunications solution that not only enhances their customer’s experience, but also provides increased profitability and a competitive advantage. Cascade Tel is a single source contact for all voice, data, and video needs.

Cascade Tel provides industry-leading products with Factory Certified Technicians, Sales and Customer Service Staff, to ensure customer satisfaction by maximizing system performance.

Cascade Tel provides around the clock service to ensure system reliability with the mission critical nature of the telecommunications. Cascade Tel offers comprehensive service 24 hours a day, 7 days a week and emergency service guaranteed within 1 hour.
